Feature: Interactive Search

This feature will enable the user to see the search results as and when they are being searched and not all in one, at the end when the entire search is complete. The user will also be able to click on the search results and view it on the main table hence, not blocking the user till the search is complete.

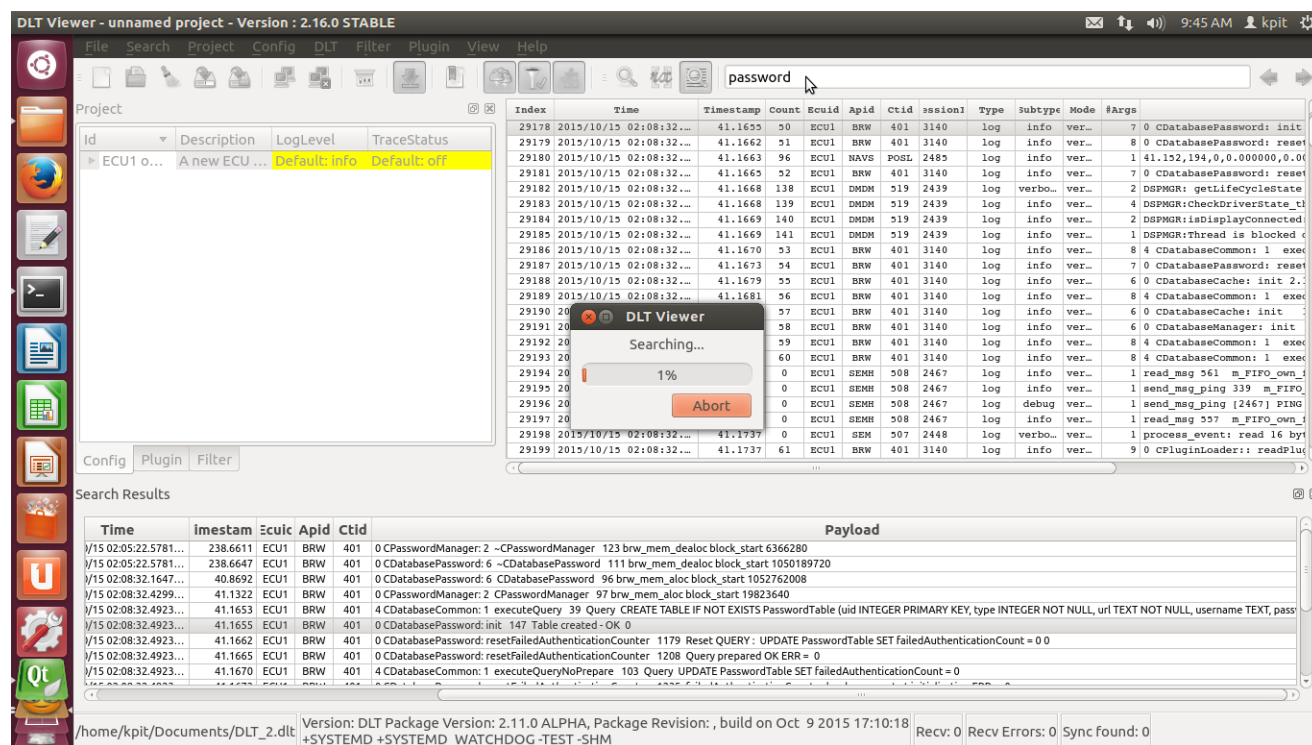

Fig 1

As seen in Figure 1, the search results are shown on the search table as soon as the there is a hit.
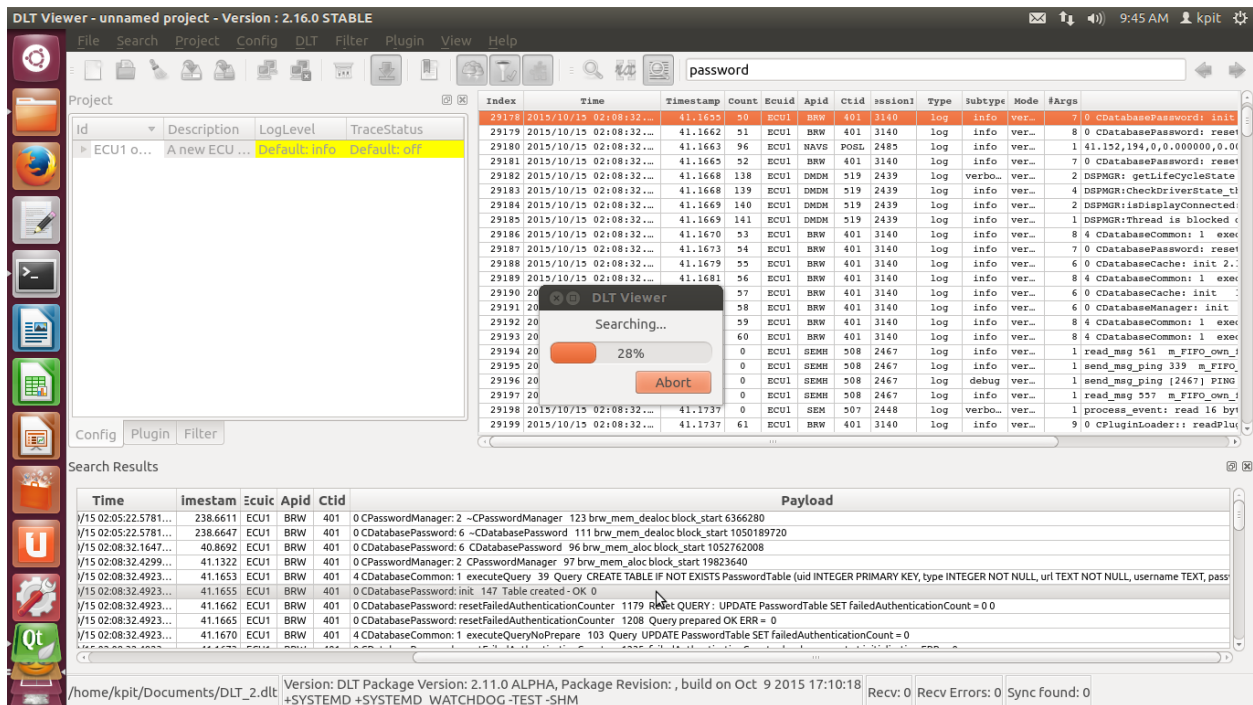

Fig 2

As seen in Fig 2, the user can click on the search table and go to the corresponding index on the main table while a search is ongoing.

In a scenario where a search takes a very long time, the user is not blocked and can continue analysis while the search operation is in progress.
